

Fast Screening of EO Benchmark Datasets for GeoFM Evaluation

Confirmed benchmark datasets only; benchmark suites excluded. Fast triage, not a final source-level audit.

Interpretation: SHORTLIST = no obvious blocker in the fast screen; VERIFY = promising but one or more key fields require source-level confirmation. “Geo refers to retained/usable geolocation, not merely a known country of origin. Large datasets are retained only when they appear realistically subsetting. License = Verify means no negative finding was established here, but the exact redistribution/use terms still need checking before final selection.
